DESIGNED TO KEEP PEOPLE SAFE WHEREVER THEY ARE

Protect people from potential coronavirus carriers and those with other infectious diseases – the VIRALERT 3 screens visitors at entry for elevated temperatures that could indicate fever.

Unlike handheld thermometers which compromise social distancing the VIRALERT 3 automatic screening system scans from a distance that complies with social distancing. Visual and audible alerts provide the warning you need to keep everyone safe.

Developed over ten years by AMETEK Land's world-leading temperature monitoring experts, the VIRALERT 3 is a real-time scanning solution that's safe, accurate, and easy to use.

Safe Screening — Instant, non-intrusive infrared thermal imaging from a distance

Fast Response — Monitor visitors without slowing the flow of people

Simple to Use — Works straight out of the box — only one mount required

Highly Accurate — Developed by world-leading temperature monitoring experts
