

Telecenter U[®]: The Building Communication System for Hospitals

Integration with Rauland Responder 5 provides endto-end communications solutions.

Rauland's Telecenter U® provides hospitals with building paging and visual messaging that integrates with Responder 5 nurse call system, resulting in a powerful combination for managing communications on any scale.

The Telecenter U system is recognized as a market leader in emergency management communications, providing guidance and assisting responders in a crisis situation.

Telecenter U can reach every part of your facility, providing customized emergency notification and response when and where you need it.

Control Communication at Any Scale

Identify emergency situations, such as an active shooter or weather emergency, and notify inhabitants and provide directions via voice, message boards and email. Initiate hazardous communications — by dedicated panic button, phone, mobile app, or web page Interface to other security systems for a unified emergency response.

Secondary announcements of Responder 5 "code blue" and patient calls to the right area, based on the call's location and priority ensures clinical staff know where they are needed.

Schedule prerecorded voice and visual messages for targeted locations and initiate live paging to specific areas or the entire building. Use text to speech notifications for easy to understand voice paging, preconfigured or on the fly.

Mapping provides a real-time visual depiction of the entire campus or floor plan of the hospital and provides instant sight line into locations of calls, without having location announced via public address. Security can initiate and identify active emergencies from a web browser.

Work with one manufacturer for a complete communications solution.

Integrating Telecenter U with Rauland's Responder® nurse call system helps staff deliver the best possible patient care, with fast, direct patient-to-staff and staff-to-staff communication, flexible integrations, intelligent call routing and real-time reporting.
